BEST SHINGLE KOREA

Our Project

Underlayer

Membrane Full Lem

Atn sheet is made by cooling and molding at room temperature with an air cooling method by sufficiently infiltrating the high-concentration improved asphalt compound made by ideally mixing asphalt and thermoplastic rubber (SBS-based) with a core material treated with special processing such as woven and non-woven fabrics made of polymeric chemicals. As a waterproof sheet that maximizes the effect, it is a high- quality sheet water-proofing material that guarantees a semi-permanent waterproof layer that has obtained the KS mark of the Korea Standards Association , a nationally recognized institution , and the Q mark of the Korea Institute of Equipment and Oil Testing.

Type and Specification

Type	Layer	Specification	Application
FWP		(m/m x m x m) (1.5 or 3.0) x 1.0x10 (ROLL)	Roof of general buildings, basement waterproofing of large buildings, subway structures, etc
Type	**Layer**	**Specification**	**Application**
NWP		(m/m x m x m) (1.2 or 2.0) x1.0x10 (ROLL)	high quality roof shingle base
Type	**Layer**	**Specification**	**Application**
A-NWP		(m/m x m x m) 1. 2x1.0x10 (ROLL)	high quality roof shingle base

- ***Excellent Modified Asphalt Compound***
- ***Excellent Durability***
- ***Excellent Elongation and Resilience***
- ***Excellent Adhesion to The Substrate***
- ***Weather Resistance and Alkali Resistance***
- ***Wide Sensitivity to Temperature Change***
- ***Economical and Constructability***
